

Occupational Therapy Now At Our La Verne Clinic

Pomona Valley Hospital Medical Center

OCCUPATIONAL THERAPY

Located at Pomona Valley Health Center – La Verne
2333 Foothill Blvd, Suite A

With 1100 square feet of rehabilitation space, our La Verne outpatient clinic has plenty of room to add Occupational Therapy (OT) to its long list of services. Available at PVHMC since 1993, this valuable outpatient program has now expanded to a second location at our La Verne rehabilitation clinic inside the

Pomona Valley Health Center (PVHC). Initially available 2-3 days a week, this program will eventually expand to Monday through Friday.

Occupational therapy assists patients of all ages to safely and effectively perform activities of daily living. The goals are a full and rapid recovery while providing knowledge and tools to aid in the management of injury, illness or disability involving the upper extremity.

Using multiple therapeutic techniques and procedures, occupational therapists evaluate and develop treatment plans focused on controlling pain, reducing swelling and abnormal sensitivity, as well as restoring strength, motion and dexterity. In addition, OT frequently provides needed bracing, splinting and adaptive equipment to assist in recovery.

Call 909.392.6531 for appointments

Physician referral required
